

FIG. 7. — Dorsal view : a, *Mursia flamma* sp. nov., ♂, cl 57.9 mm, holotype, Madagascar, 370 m (MNHN-B 24371). — b, *Mursia spinimanus* Rathbun, 1906, ♂, holotype, cl 35.8 mm, Hawaiian Ids, 232 m (USNM 29922). — c, *Mursia trispinosa* Parisi, 1914, ♂ cl 42.5 mm, Philippines, 170 m (MNHN-B 24428). — d, *Platymera gaudichaudii* H. Milne Edwards, 1837, ♂ cl 45.9 mm, Mexico (MNHN-B 88).

REMARKS. — *M. microspina* bears resemblance to *M. hawaiiensis* in having a short lateral spine but differs in having a more prominent granulation on carapace, lobes of abdominal crest rounded, coequal and distal portion of second male pleopod crook-shaped.

DISTRIBUTION. — Australia, New Caledonia, Japan; 200-420 m.

Mursia musorstomia sp. nov.

DESCRIPTION. — Carapace 1.2 wide as long, surface densely setose, granulose. Radial tubercles prominent. Median frontal lobe triangular, projecting beyond lateral lobes. Supraorbital margin bifissured. Suborbital sinus wide, U-shaped, suborbital tooth triangular, apex pointing inward. Anterolateral margins cristate, with ten granulose teeth, diminishing in size posteriorly. Lateral spine 0.1 carapace width, minutely granulate, curved upwards. Posterolateral margin beaded, angled medially. Lateral lobes of posterior margin triangular, laminar, curved. Chelipeds externally granulose, setose. Merus of cheliped trispinose, distal spine longer than lateral spine. Outer surface of chela set with nine tubercles in three oblique rows and three tubercles near base of serrate upper crest, tubercles in lowest row laminar, proximalmost triangular, keel-like, distalmost smallest, rounded. Lower margin serrate, teeth smaller proximally. Dactylus minutely granulate proximally on anterior margin. Upper margin of pereiopodal carpi crested, granulate. Abdominal crest with rounded lateral lobes, subquadrate median lobe. Cornute distal portion of second male pleopod curved, hook-shaped.

Color (in alcohol). - Two red spots on distal margin of buccal area. Small red spot on inner palm near dactylar base.

ETYMOLOGY. — The specific name is derived from the expedition acronym - MUSORSTOM.

REMARKS. — Superficially resembling *M. australiensis* in its rounded, granulose carapace and elongate distal spine on cheliped merus, *M. musorstromia* is easily distinguished by its setose carapace, shorter lateral spines, bifissured suborbital margins, granulate last ambulatory meri and hook-shaped second male pleopod.

DISTRIBUTION. — Known only from the type locality, New Caledonia; 420-575 m.

MATERIAL EXAMINED. — **Hawaiian Islands.** "Albatross" : stn 3856, Pailolo Channel, between Molokai and Maui, 232 m, 9 April 1902 : 1 ♂, cl 35.8, cw 46.4, mcw 65.7, Holotype; 1 ♀, cl 27.6, cw 34.2, mcw 46.6, Paratype (USNM 29922). — Stn 3811, Oahu Id., off Honolulu Lt., 435-461 m, 27 March 1902 : 1 ♂ yg, cl 18.8, cw 23.5, mcw 32.9 (USNM 29919).

TYPE LOCALITY. — Pailolo Channel, Hawaiian Islands (RATHBUN, 1906).

DESCRIPTION. — Carapace 1.3 wide as long, surface minutely granulate. Radial tubercles indistinct. Median frontal lobe triangular, projecting forward beyond rounded lateral lobes. Supraorbital margin unifissured. Suborbital sinus v-shaped, suborbital tooth triangular, apex pointing inward. Anterolateral margins cristate, with ten minute teeth. Lateral spine one fifth carapace width, minutely granulate, slanting upwards. Posterolateral margin beaded, sinuous. Lateral lobes of posterior margin triangular, laminar, upcurved. Chelipeds externally granulate. Merus of cheliped trispinose, distal spine largest. Outer surface of chela closely granulate, with nine tubercles in three oblique rows and three tubercles near base of serrate upper crest, proximal tubercle in lowest row acuminate, keel-like, median tubercle crested. Lower margin serrate, teeth smaller proximally. Dactylus granulate proximally on anterior margin. Upper margin of pereiopodal carpi rounded, minutely granulate. Abdominal crest deeply cut, median lobe quadrate. Cornute tip of second male pleopod beta-shaped.

REMARKS. — *M. spinimanus* resembles *M. hawaiiensis* in having a minutely granulate carapace with indistinct radial tubercles, minutely dentate, cristate anterolateral margins and a keel-like tubercle proximally on
