

EXPLANATION OF PLATE LXIII.

*Trachypeneus granulosus* (Haswell).

Fig. 1. Lateral view of a female specimen (Reg. No. P.3527), measuring 33.5 mm. from the tip of the rostrum to the end of the carapace.

(NOTE.—Pleuron of first abdominal somite drawn from the other side. Antennular flagellum and dactyls of fourth legs missing, and drawn from other specimens about the same size.)

Fig. 2. Thelycum of same specimen.

*Trachypeneus curvirostris* (Stimpson).

Fig. 3. Thelycum of a female specimen (Reg. No. E.4472 *part*), measuring 18 mm. from the end of the incomplete rostrum to the hinder margin of the carapace.

Miss E. A. KING, del.
