Nayadina (Exputens) and show how extensive warm-water conditions were along the Pacific coast of North America during early to middle Eocene time. Previously, the northernmost occurrence of Nayadina (Exputens) was central western Oregon. BALDWIN (1955) reported Exputens alexi (Clark, 1934) from the lower Eocene Siletz River Volcanic Series in central western Oregon. SQUIRES (1990) showed that Exputens alexi is conspecific with N. (E.) llajasensis.

ACKNOWLEDGMENTS

Roger W. Portell (Florida Natural History Museum) informed the author about the Jamaican specimens that he and others collected. He also provided for the loan of the specimens. M. C. Perrilliat (Instituto de Geología, Universidad Nacional Autónoma Museum de México) arranged for permission for paleontologic collecting in Baja California Sur. She also provided the type-specimen numbers. Robert A. Demetrion helped in collecting the Baja specimens. James L. Goedert informed the author about the Washington specimens that he and Keith L. Kaler collected. The manuscript was reviewed by E. J. Moore, Oregon State University, Corvallis, and by an anonymous reviewer.

LOCALITIES CITED

- CSUN 1471. Near middle of canyon wall along W side of Arroyo San Juan de Abajo, about 80 m elevation, about 0.75 km W of dirt road from San José de Gracia to El Datilon, at 112°44'W and 26°29.5'N, Mexican government 1:50,000 topographic quadrangle map of Punta Santo Domingo (number G12A47), Baja California Sur, Mexico, 1982. Bateque Formation. Age: Middle early Eocene ("Capay Stage"). Collectors: R. L. Squires and R. A. Demetrion, April 1990.
- CSUN 1491. In a small quarry on S side of Mexico Highway 1, at 74.5 km N of La Paz, coordinates 9.5 and 71.5 of Mexican government 1:50,000 topographic quadrangle map of El Conejo (number G12D81), Baja California Sur, Mexico, 1983. Tepetate Formation. Age: Middle early Eocene ("Capay Stage"). Collectors: R. L. Squires and R. A. Demetrion, June 1991. = LACMIP
- CSUN 1502. From boulder-sized rocks not in place but in a modern landslide block, 2 km S of Quilcene on W shore of Quilcene Bay just S of latitude $47^{\circ}47'30''$, NE¹/₄, section 36, T27N, R2W, Quilcene quadrangle (7.5 minute), 1953, Jefferson County, northwestern Washington. Upper Crescent Formation. Age: Early Eocene (near the boundary between the "Capay Stage" and the "Domengine Stage"). Collectors: J. L. Goedert and K. Kaler, April 1990. (Note: this locality is probably the same as locality University of Washington 353 described by WEAVER (1943:602)). =LACMIP $I_P(.154|D.$
- CSUN 1516. About 20 m above the base of the Aldwell(?) Formation, 1380 m N of tip of Pulali Point, in beach cliff along W shore of Dabob Bay, section 18, T26N,

R1W, Seabeck quadrangle (7.5 minute), 1953, photorevised 1968, Jefferson County, northwestern Washington. Aldwell(?) Formation. Age: Middle Eocene (Narizian Stage). Collector: J. L. Goedert, June 1990.

- CSUN 1522. In a small arroyo about 0.5 km N of Mexico Highway 1, at 75 km N of La Paz, coordinates 9 and 72 of Mexican government 1:50,000 topographic quadrangle map of El Conejo (number G12D81), Baja California Sur, Mexico, 1983. Tepetate Formation. Age: Middle early Eocene ("Capay Stage"). Collector: R. A. Demetrion, July 1991.
- UF XJ012. Small exposure on W side of road, 5 km S of Johns Hall Quarry, Spring Mount, St. James Parish, Jamaica. Chapelton Formation. Age: Middle Eocene. Collectors: Portell, Bryan, Heller, and Frederick, May 1990.
- UF XJ018. Along stream between Pump Station and Wait-A-Bit Cave at Wait-A-Bit, Trelawny Parish, Jamaica. Stettin Member of Chapelton Formation. Age: Early Eocene. Collectors: Portell, Bryan, Heller, and Frederick, May 1990.
