List of Stations, Nets and Dredges.....	35

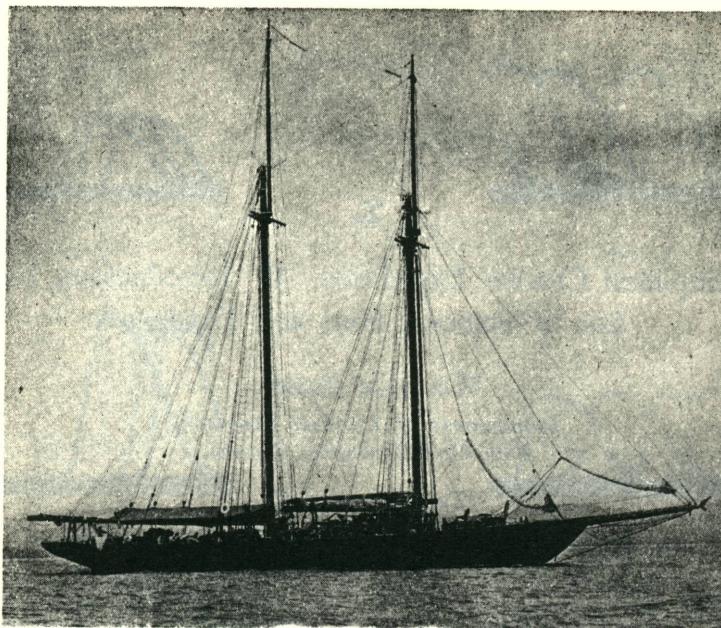

INTRODUCTION.

The Twenty-fourth Expedition of the Department of Tropical Research was the result of an invitation from Mr. Templeton Crocker to accompany him on board his yacht *Zaca* on a trip to the Gulf of California. The Zoological Society is in Mr. Crocker's debt for the opportunities that he gave us to study the animal life of little-known places and for allowing us to concentrate our trawling and dredging activities on a few, carefully-chosen localities. Not only must Mr. Crocker be given full credit for the inception and carrying out of the expedition and for the constant care that he took to see that every wish of ours was provided for, but especial thanks are due to him for his active part in capturing, sorting, labelling and preserving specimens, thousands of which passed through his hands.

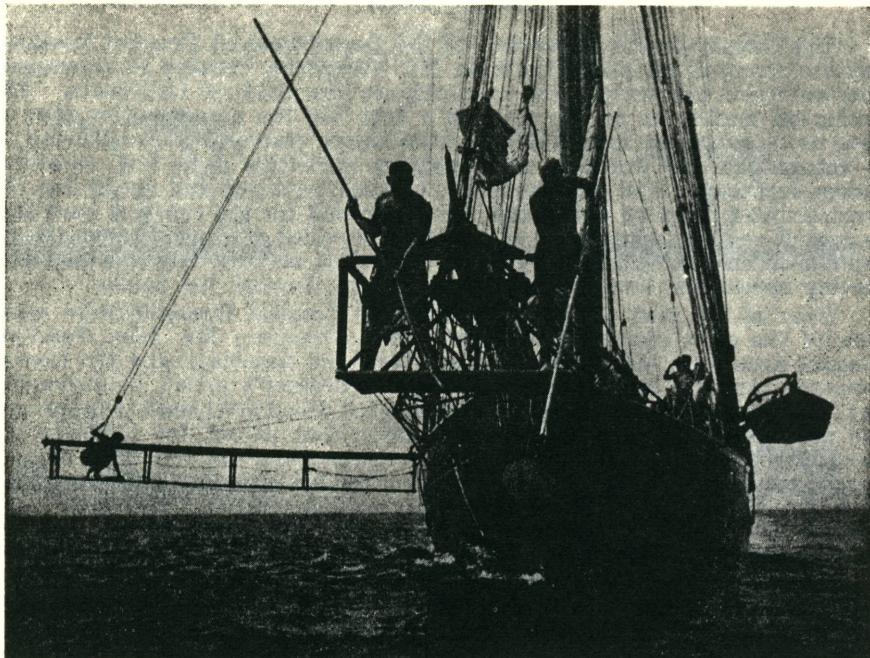

Four of the staff of the Department of Tropical Research were members of the expedition: Dr. William Beebe, Director; Mr. John Tee-Van, General Associate; Miss Jocelyn Crane, Technical Associate, and Mr. George Swanson, Artist. Mr. Toshio Asaeda, Mr. Crocker's artist, photographer and taxidermist, will always be remembered for his tireless energy and the able accomplishment of the many tasks that he set for himself. Of the efficient and carefully trained crew of the *Zaca* the following deserve special mention: Captain Alfred Pedersen, for his excellent handling of the ship and of the new dredging machinery and apparatus, First Mate John Ozanne, and the two Samoans, Pemasu Utu and Frank Taiga, both of whom demonstrated amazing skill in the capture of sea and shore life.

The *Zaca* (Text-fig. 1) is a Diesel schooner, 118 feet over all, with a gross tonnage of 84. She is supplied with all of the usual apparatus for capturing fish and animal life, such as seines, nets, submerged lights, etc.,

¹ Contribution No. 520, Department of Tropical Research, New York Zoological Society. This paper should have been No. I of the Templeton Crocker series, but unforeseen circumstances of publication shifted its position. No. I has the following title: The Templeton Crocker Expedition. I. Six New Brachyuran Crabs from the Gulf of California, by Steve A. Glassell, and was published in *Zoologica*, XXI, No. 17, pp. 213-218.

in addition to which Mr. Crocker provided, expressly for this expedition, a gasoline-engined winch and a 7,500-foot length of $\frac{1}{4}$ -inch diameter steel cable. With this apparatus we were able to trawl with silk plankton nets to a maximum depth of 600 fathoms and to dredge on the bottom with deep-sea dredges. Two newly-built and constantly used features of the vessel were the bow-pulpit placed at the tip of the bowsprit and the boom-walk on the starboard side of the ship (Text-fig. 2).

ITINERARY.

The route of the expedition is shown on the map in Text-fig. 3 and details of positions and depths of dredges at stations where large numbers of dredgings were made, are shown in Text-figs. 4 to 8 inclusive. The dates at the various localities, all in 1936, are as follows:² San Diego, March 19; Catalina Island, March 20, 21; San Diego, March 22 to 25; Cedros Island, March 27; Turtle Bay, March 27; Magdalena Bay, March 29; Cape San Lucas, March 30 to April 3; Gorda Banks, April 3; Arena Bank, April 4; Ceralbo Island, April 4; Espiritu Santo Island, April 4; Guaymas, April 6 to 8; Santa Inez Bay, April 9 to 17; Arena Bank, April 19 to 21; Gorda Banks, April 21 to 23; Cape San Lucas, April 23 to 26; Mazatlan, April 27 to 28; Arena Bank, April 30 to May 2; Gorda Banks, May 2 and 3; Cape San Lucas, May 3 to 7; Clarion Island, May 10 to 16; Alijos Rocks, May 19; Cedros Island, May 22; San Diego, May 25.

This list of localities seems rather long, but many of the names are duplicated, Cape San Lucas and Arena Bank, for instance, appearing three times.

Analysis of the time spent by the expedition in various phases of work illustrates the Department's method of concentrating its researches on a few, carefully-chosen localities. Thus 29 of the 61 days (48%) that the expedition was away from San Diego, were spent in sailing or concerned with oceanographic stations, working with plankton nets and submerged lights. During the remaining 32 days we worked littoral localities, mostly within the 100-fathom line. 95 per cent. of these 32 days were divided among three stations as follows: Cape San Lucas and adjacent banks (Gorda Banks, Arena Bank) 17 days (52%); Santa Inez Bay, $7\frac{1}{2}$ days (24%); Clarion Island, 6 days (19%).

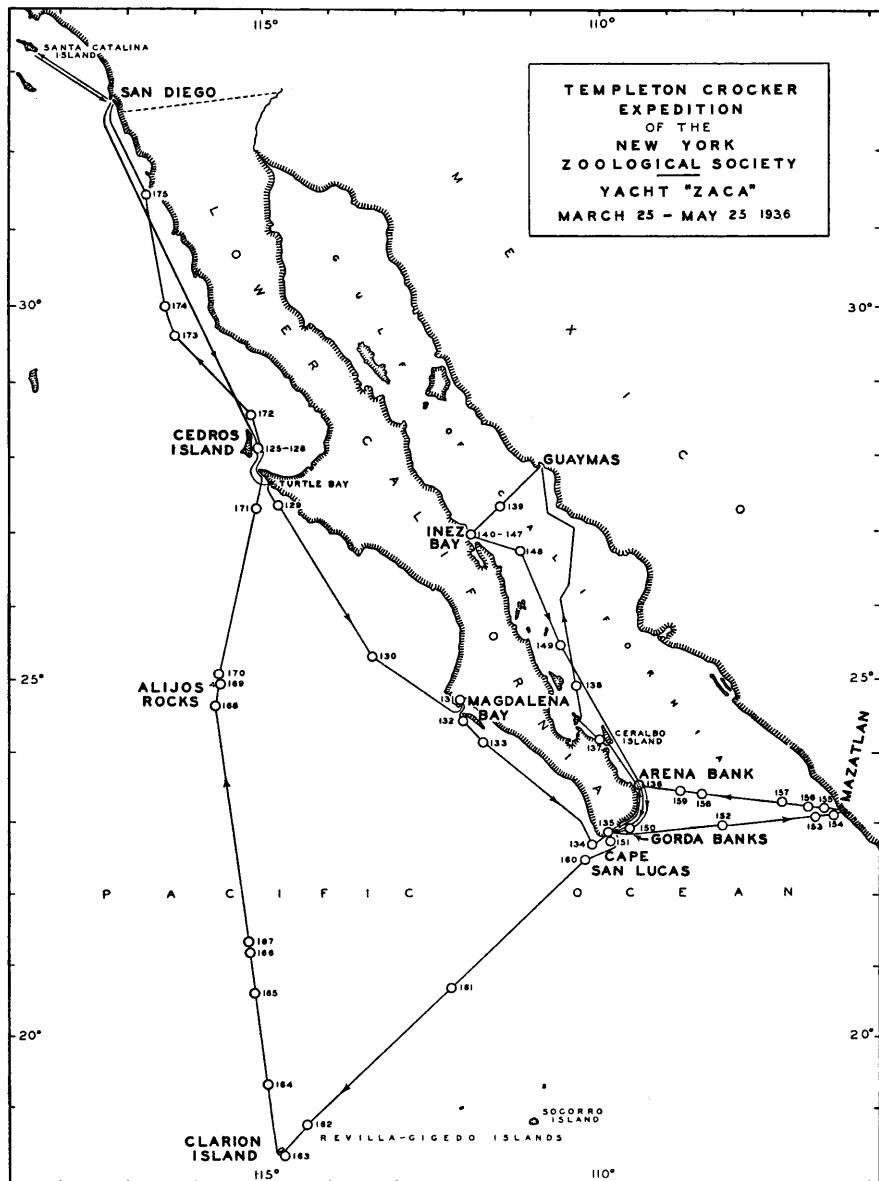

LIST OF STATIONS, NETS AND DREDGES.

In the following tables most of the facts are self-evident and the abbreviations are explained in the following sentences. The station numbers refer to the continuously numbered series of oceanographic stations of the Department of Tropical Research. In the second column the letter "D" refers to dredges and the letter "T" to tow-nets, so that for the sake of brevity a net may be referred to as "126 D-12," indicating the twelfth dredge at Station 126.

In the third column the 2-foot and 4-foot dredges were of the Blake type with mouths of the width stated. The bags of these dredges were of 2-inch and 1-inch stretched mesh, the majority being of the latter size. With the exception of dredge 125 D-1, all of the 2-foot dredge hauls were made from the *Zaca*'s tenders. Dredge 125 D-1 and all of the 4-foot dredge hauls were handled from the deck of the yacht, using the $\frac{1}{4}$ -inch steel cable previously mentioned.

The tow-nets of one-half metre and one metre diameter were of standard Michael Sars' type, with 2XX silk bolting cloth posteriorly and OXX bolting cloth anteriorly, the mouth of the net having a collar of shrimp

² This list includes only the shore stations and fueling localities. For details as to dates, etc., of the oceanographic stations see the List of Stations, Nets and Dredges.

Text-figure 3.

Route of the Templeton Crocker Expedition. The circles with attached numbers represent the positions of the dredging and oceanographic stations.

netting. The foot nets were diatom nets one foot in diameter and made of No. 20 silk bolting cloth.

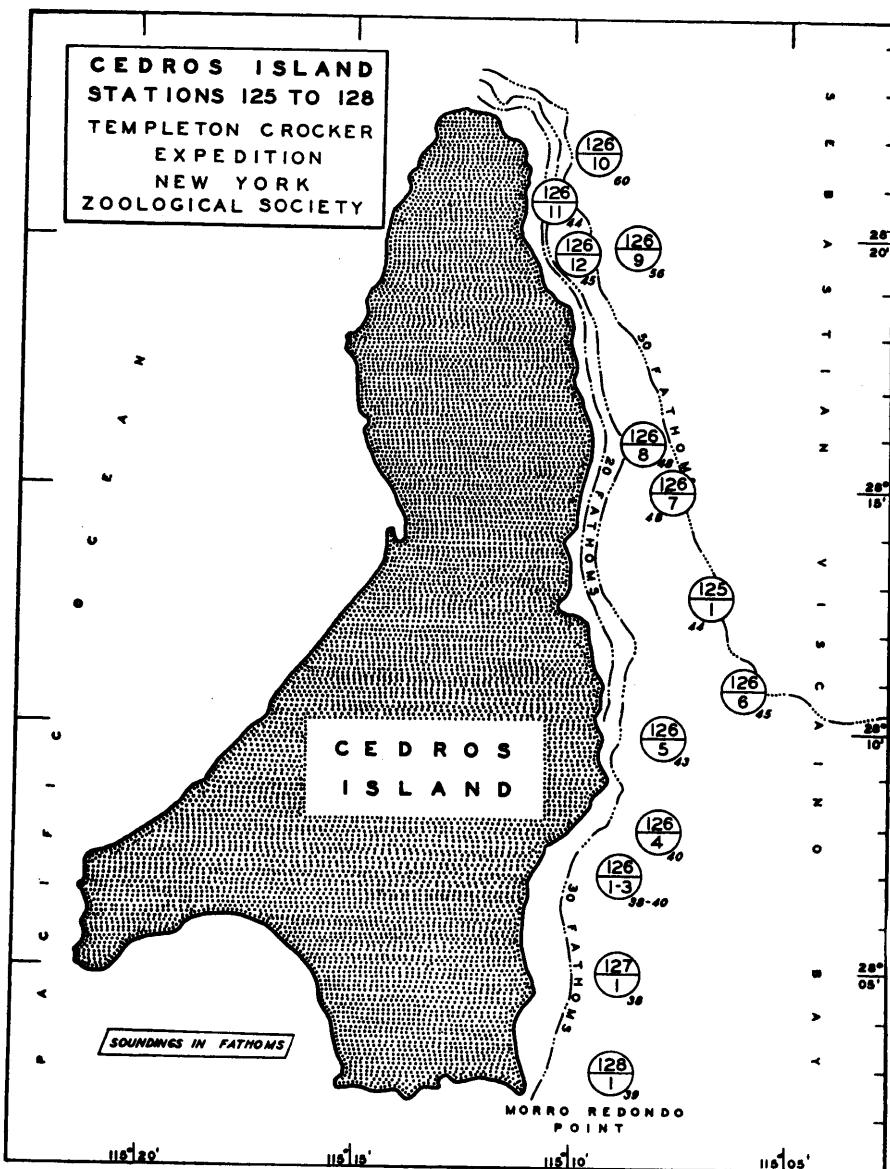

Light, when used in the third column, refers to night stations where submerged electric lights were employed and the captures of animals were made principally with dip nets.

STATION LISTS AND DATA.

Station No.	Net No.	Type of Net	Depth		Position		General Locality	Date 1936	Start of Haul	Duration of Haul
