Crustacea sieve net (aka “Mermaid’s Bra”)  

Mesh is usually Nitex® mesh of 63 μm or 250 μm mesh size. Handle loop is made from ⅛” diameter brass rod.

To make template, print both pages, tape together at cutlines. Semicircle will be 14” in diameter. Full circumference will be approximately $\pi \cdot 14” = 44”$

Cut semicircle of Nitex® mesh based on paper template. Sew on edging tape around curved side to form channel for brass loop first. Then curl the brass slightly and feed through loop. Form final brass loop shape. Sew up side seam last. Use lab tubing or tape to cover and bind handle rods.
