SOME CORRECTIONS NEEDED IN RECENT  
CARCINOLOGICAL LITERATURE

BY

STEVE A. GLASSELL

*Research Associate in Crustacea, San Diego Society of Natural History*

In the course of studies I have undertaken on Pacific coast crustacea, it appears that a number of corrections in current American literature are in order and should be made. The more obvious of these that have come to my attention during the past several years are as follows. Errors can be expected during the progress of any science and my listing of some necessary corrections is done merely for the convenience of active workers in this field. Some of these corrections have been made, indirectly, by means of synonymic references in the works of Dr. Mary J. Rathbun, but others do not seem to have been noticed. The first column lists the items as published, the second lists the correct names. The author in each case is Lee Boone.
